

JUST ENJOY IBIZA — MASTER ACCOUNTS LIST

Owner: Alin Letca · alin.letca2010@gmail.com · Updated 25 May 2026

Live Websites

SITE	URL
Boats site (live)	https://justenjoyibizaboats.com
Master brand site	https://justenjoyibiza.com
CRM (internal)	Lives on Netlify — your private dashboard URL

Code & Hosting

GitHub — Source Code (the master copy of everything)

URL: <https://github.com>

Login: Your GitHub account

Repos:

- justenjoyibiza/OnlyBoats → code for justenjoyibizaboats.com
- justenjoyibiza/JustEnjoyIbiza.CRM → code for the CRM

Every file change you make commits here. Netlify watches GitHub and auto-deploys.

Netlify — Hosting + Auto-Deploy + Forms + API Keys

URL: <https://app.netlify.com>

Login: Sign in with GitHub

What it does:

- Hosts both websites (pulls from GitHub on every commit)
- Runs Netlify Functions: send-email, google-reviews, daily-reminders
- Stores all API keys as environment variables (NEVER put keys in code)

Env vars stored here: RESEND_API_KEY, SUPABASE_URL, SUPABASE_KEY, CALLEBOT_PHONE, Google Places API key

Content Editing

Pages CMS — Edit Boats Without Code

URL: <https://app.pagescms.org>

Login: Sign in with GitHub

Friendly editor for boats.json: change prices, add or remove boats, toggle Published, upload photos. Photos saved to public/assets/img/ in the OnlyBoats repo.

Squoosh — Image Compression (use BEFORE uploading photos)

URL: <https://squoosh.app>

Login: None needed

Settings: Resize to 1600px width, MozJPEG quality 75. Photos straight from camera are too big — they fail upload and slow the site.

Analytics & SEO

Google Analytics 4 — Traffic Stats

URL: <https://analytics.google.com>

Login: alin.letca2010@gmail.com (Google account)

Property ID: G-JRDCG93F2Z

Shows: visitor count, what pages they view, how long they stay, where they came from.

Google Search Console — How Google Sees Your Site

URL: <https://search.google.com/search-console>

Login: Your Google account

Shows: which Google searches lead to your site, ranking position, indexing errors.

Bing Webmaster Tools — Bing + AI Search (ChatGPT uses Bing)

URL: <https://www.bing.com/webmasters>

Login: Microsoft account

Submit sitemap, see Bing ranking, SEO report card.

IndexNow key: d25a34feadd24a58ba4fc3ec6a266f7a (auto-pinged via GitHub Action)

Google Cloud Console — Powers the Google Reviews Widget

URL: <https://console.cloud.google.com>

Login: Your Google account

Holds the Places API key that powers the reviews widget on your homepage. API enabled: Places API.

Email & Messaging

Resend — The Engine Behind CRM Emails

URL: <https://resend.com>

Login: Your account

Sends emails from info@justenjoyibiza.com (signature emails, contracts) on behalf of the CRM. API key stored in Netlify env vars as RESEND_API_KEY.

Usebasin — Catches Inquiry Forms from the Website

URL: <https://usebasin.com>

Login: Your account

Form endpoint: <https://usebasin.com/f/d0b5557a2cc1>

Catches every form submission on the boats site and emails it to you.

WhatsApp Business

Number: +34 642 45 39 52

Used in CRM email signatures and the floating WhatsApp button on the site.

Database

Supabase — CRM Backend Database

URL: <https://supabase.com>

Login: Your account

Stores all CRM data: clients, bookings, contracts, history. Credentials stored in Netlify env vars as SUPABASE_URL and SUPABASE_KEY.

Domains

Domain Registrar (where you bought the .com names)

Check your billing email — likely GoDaddy, Namecheap, or wherever you registered.

Domains owned:

- justenjoyibiza.com
- justenjoyibizaboats.com
- justenjoyibizatours.com (if registered — future Phase 5 site)

DNS pointing to: Netlify

Quick Mental Model — How It All Connects

When You Edit a Boat

You edit boats in Pages CMS → Pages CMS commits to GitHub → GitHub triggers Netlify → Netlify rebuilds + deploys → Live site updates in ~60 seconds.

When a Customer Inquires

Customer fills inquiry form → Usebasin catches it → Email arrives in your inbox → You add to CRM → CRM sends contract via Resend → Customer receives email.

How You Track Performance

Google and Bing crawl your site → GA4 + Search Console + Bing Tools show stats → You see which pages perform.

If Something Breaks — Troubleshooting Order

1. Site is down

Check Netlify dashboard for deploy errors

2. CMS not saving

Check Pages CMS, then check GitHub repo for recent commits

3. Photos missing

Check public/assets/img/ in GitHub

4. Form not sending

Check Usebasin dashboard for spam blocking

5. CRM email fails

Check Resend dashboard for rejected sends

6. Traffic dropped

Check Google Search Console for indexing errors

Pin These 6 Tabs in Chrome

Right-click each tab → "Pin tab" — they become tiny icons on the left and survive closing the browser.
